

AUTODOS

UNIVERSAL FEEDING DOSER

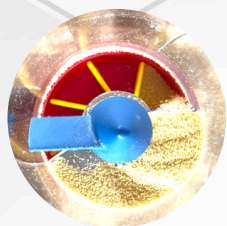

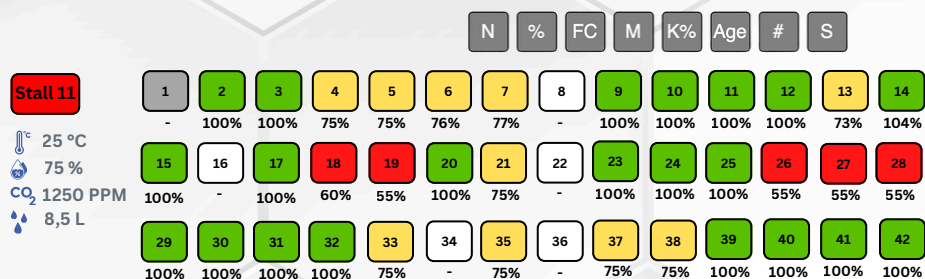

- ▶ **Smart portioning**
- ▶ **Slow feeding**
- ▶ **More animal welfare**
- ▶ **Feeding on demand**
- ▶ **Less human error**
- ▶ **Livestock management**

SMART PEN

The Universal Feeder Doser for Modern Pig Farming

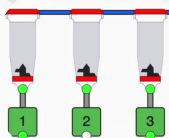

Autodos is a versatile feeder doser managed through the OnCon platform, designed to meet the demands of contemporary pig farming. It ensures smart feeding that adapts to the animals' needs and life stages. By utilizing feed curves and sensors, it accurately monitors the animals' requests, preventing overfeeding or excess water in the trough. Compact, sturdy, and user-friendly, it stands out as the top sow feeder in the market, offering exceptional operation and performance.

SMART FARMING

AUTODOS - SOW FEEDING

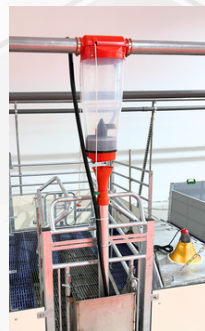

Reliable feeding of sows, small portions and smart sensor

AUTOSOW

FARROWING

GESTATION

TROUGH SMART SENSOR

Farrowing sows should be fed slowly according to their needs. Giving birth and providing milk for rapidly growing piglets places significant stress on the sow. A decrease in libido may indicate underlying health issues, and feed that remains in the trough for too long quickly loses its nutritional value, potentially posing risks to the sow. Additionally, slow feeding is crucial for ensuring adequate water intake.

Complete farm automation platform to control and automate all aspects of a modern livestock farming.
